

Bird Control Netting

Custom solutions to avian interference.

InCord provides netting solutions for the exclusion of birds in virtually any environment. Particular to aquaculture and agricultural sites as well as commercial sites, rooftops, overhangs and outdoor courtyards, bird netting is an asset to any enclosed or semi-enclosed area requiring protection from bird interference.

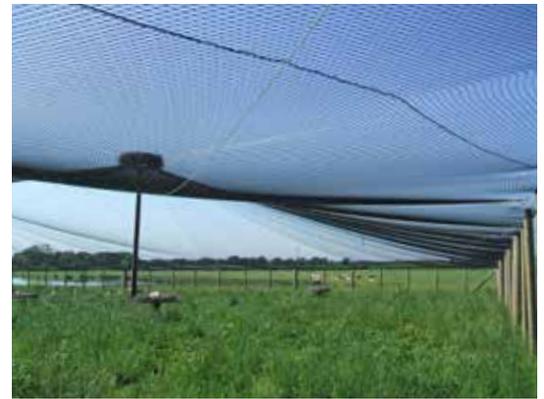

Fish Protection

Bird netting is ideal for fish hatcheries and fish wildlife preserves as an effective deterrent from preying birds. These birds are typically larger in size, such as pelicans and seagulls, and as such InCord typically recommends a larger mesh size.

Crop Protection

Assisting in the consistent yield of fruit and vegetable crops, bird netting is essential to crop production and harvest. Bird netting is lightweight, yet highly durable, allowing installations directly on top of crops in an appropriate mesh size.

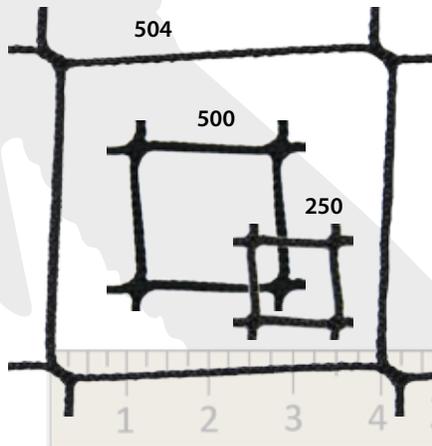

Building/Courtyard Protection

Especially in urban settings, bird netting can be highly useful in the exclusion of birds from pedestrian walkways and gathering spaces. Commercial truck bays and other industrial hatches can also benefit from the use of bird netting, preventing unwanted entry and roosting.

InCord has a variety of netting styles perfectly suited for bird exclusion or bird containment of virtually any species.

Netting	Mesh	Birds/Pests
DNR900	3/8"	Bats, all birds
250	1"	Sparrows, Swallows
500	1-3/4"	Robins, Pigeons, Hawks
504	4"	Seagulls, Crows, Eagles

For over 20 years, InCord has provided bird netting to organizations large and small as a safe and environmentally sound solution for bird pest management. Bird netting from InCord is available in High Tenacity Polypropylene or Polyester and is highly resistant to wear and weather elements.

An InCord representative will be happy to assist you with the right solution to your needs. Get in touch with InCord to learn more.
