Cargo Net Liners

InCord Cargo Climb Rope Nets (CCRN) are designed to withstand the interactive ware of play and recreation environments.

The woven mesh openings provide a stable walking and climbing surface and a structural base for stacking or suspending additional net panels.

Small mesh and fine mesh net panels, called liners, can add the function of debris and loose object catch, containment of interactive feet and hands from fall through, replaceable surface mat, and an element of additional theming.

Liner nets are lashed to the perimeter rope of the CCRN, and depending on orientation, will be lashed to either the front, back, top or bottom for the desired function of containment or theming.
